

An established and growing environmental consulting firm in southern California is searching for a Scientific Diver to join our team.

MBC *Applied Environmental Sciences* is looking for a motivated scientific diver to work in southern California. The company has been established for decades, and has recently seen several years of growth. The successful candidate will be an established diver, have some knowledge of southern California's marine resources, and have a team-oriented mindset.

Scientific diving will include: participation in scientific surveys of subtidal, estuarine, and freshwater habitats; collection of sediments, algae, and tissues for analysis; maintenance of dive gear and dive logs; and written assessments of underwater observations. Subject areas include: kelp, eelgrass, sediment quality, water quality, and terrestrial and aquatic biological resources (from invertebrates to mammals). Diving Instructor certification preferred, but not mandatory.

Work Environment:

Professional demeanor, but casual office near John Wayne Airport.

Compensation & Benefits:

Commensurate with the level of responsibilities described. The company offers a competitive benefits package, including medical insurance, FSA, and 401(k) plan.
