## *Neosabellaria cementarium* (Moore 1906)

- Three para-thoracic (Pas) segments (Subfamily Sabellariinae)
- Opercular stalk and crown (Opc) completely fused
- Opercular palae in three visible rows
- Outer palae (op) stout with rich golden-brown color; with short pilose plume distally
- Middle palae (mp) with elongate blades; distal ends almost erect, tapering to dull tip
- Inner palae (ip) clavate
