

II. Lysippe B (undescribed)

1. Branchiae slender, textured, with many white cross-bars.
2. Prostomium more obscurely trilobed, with median part fairly flush with lateral margins or barely projecting.
3. Lower lip obviously crenulated, with well-defined rounded projections on the anterior margin (fig. 3).
4. Methyl green staining:
 - a. Uncinal tori usually with postsetal patch of green dots.
 - b. Typical ventral pattern per segment: broad light band, thin dark band, broad medium-dark band.
 - c. Ventrally, stains for 10 setigers, then stops abruptly.
