

Species: Campylaspis sp. E

Museum Number: 171

Describer: Undescribed Date: \_\_\_\_\_ Family: Nannastacidae

Common Name: \_\_\_\_\_

Source: \_\_\_\_\_

Synonymy: \_\_\_\_\_ Location: \_\_\_\_\_

Distinguishing Characteristics:

Deeply depressed lateral sulcus on carapace initiating at subrostral margin and extending to slightly beyond center of carapace.

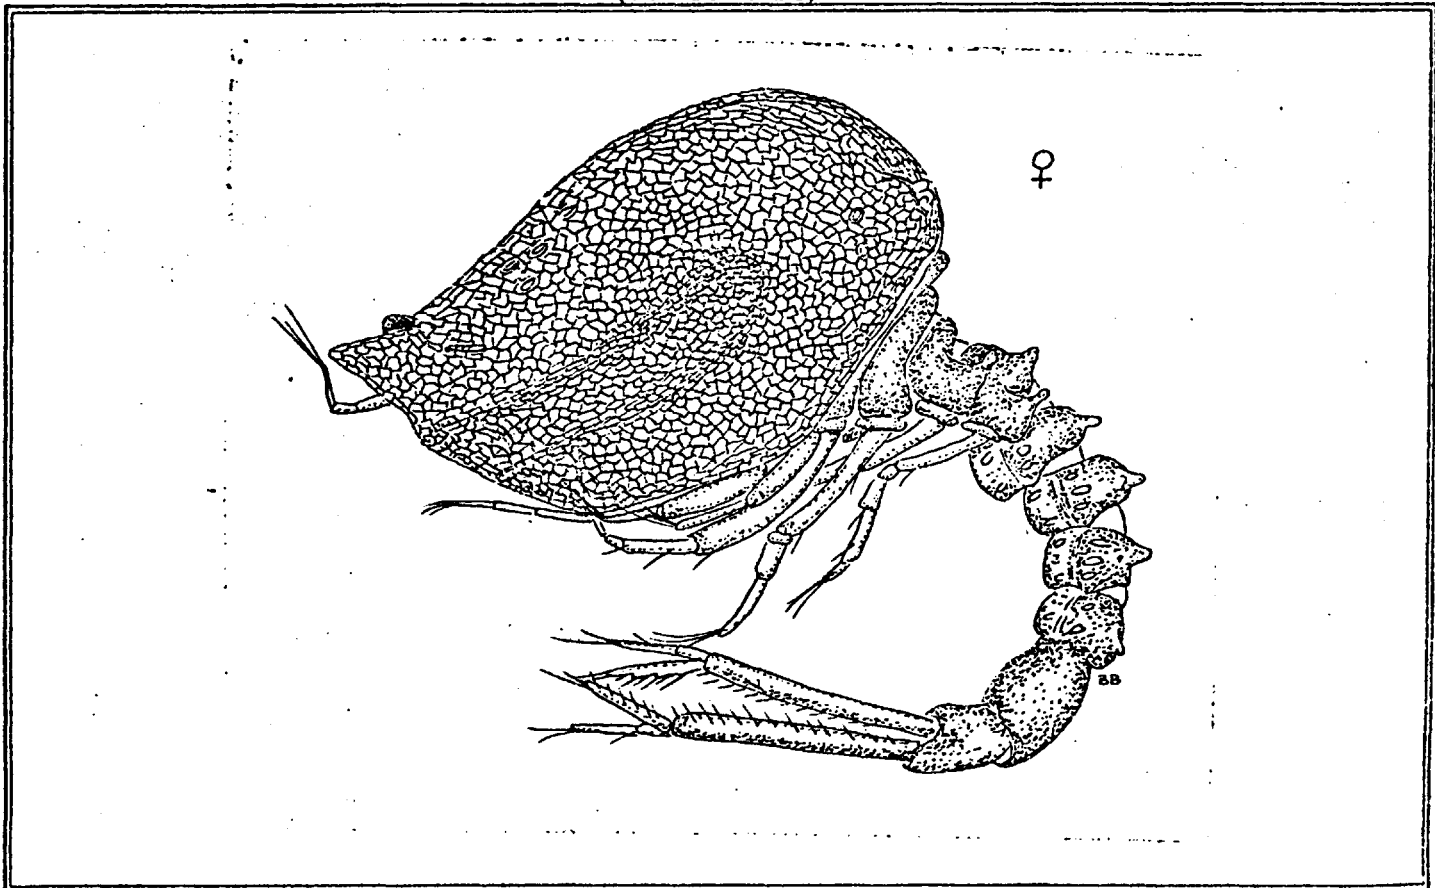

Two dorsally projecting knobules on thoracic segments 4 & 5, and abdominal segments 1-4

Postero-dorsal carapace with 2 elevations topped with several distinct knobules

Body heavily calcified and deeply pitted, a series of minute sharp reticulating ridges often drawn to points

Anterio-dorsal area of carapace with series of deep smooth pits postero-lateral

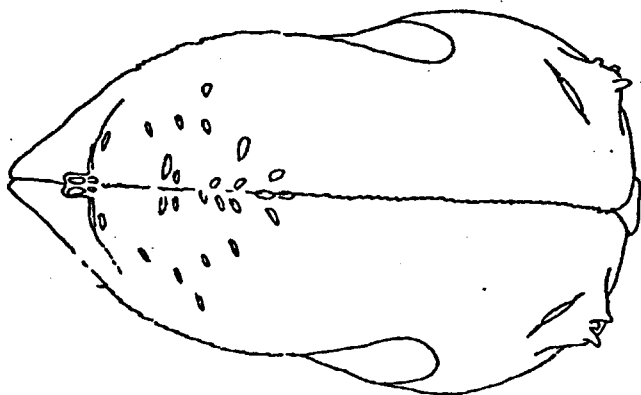

(see reverse)

Distinguishing Characteristics (cont.):

area with a pair of such pits and two elongate pits posterio-dorsally.

Abdominal segments with smooth bottomed pits laterally.

Ovigerous: J F M A M J J A S O N D

Juvenile: J F M A M J J A S O N D
