

Falcidens sp.A            MEC, Shrake  
Chaetodermatidae

SCAMIT Vol. 4, No. 8

---

Scamit Code: LAC058

Date Examined: 16 September 1985

Voucher By: Jay Shrake, MEC

Synonymy: None

Literature: Heath, 1911  
             Schwabl, 1961, 1963  
             Salvini-Plawen, 1975  
             Scheltema, 1972

Diagnostic Characters:

- 1) Radula: with a pair of sickle shaped teeth very similar to Falcidens sp.B. With a proximal synapse. Frontal width of radula cone slender. Subradular membrane notched.
- 2) Scales: uniform, simple triangular tapering shape, some keeled, some with indented bases.
- 3) Body: homogeneously shaped, small. Scales in region two (2) are at a 90° angle to body wall.

Distribution:

Southern California north to Point Conception; 50 to 200 meters; in silty sand and mud; shelf, slope areas.
