Lumbrineris limicola

Anterior setigers

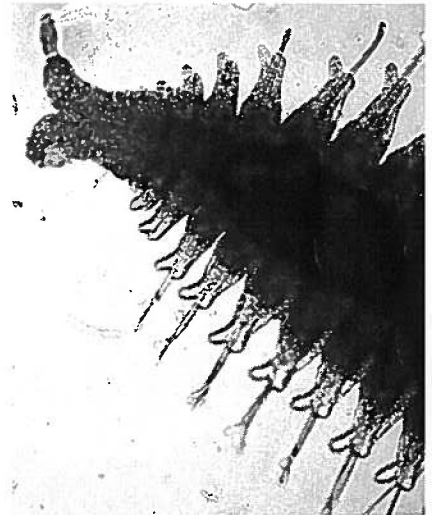

Posteriomedian setiger

Lumbrineris [nr *limicola*] = sp. n. SCAMIT, 2001

Anterior setigers

These are smaller worms which Larry Lovell first called *L. latreilli* because the posterior postsetal lobes were short (see the figure to the right). His reexamination revealed that only the postsetal lobes in the postmedian region were prolonged while more posterior postsetal lobes resembled those of anterior setigers

Posterior setigers
