

SCAMIT Code: PL 59

Date examined: March 3, 1985
Voucher by: Karen Green (MEC)

Diagnostic characters:

1. Anal plaque asymmetrical with dorsal side reduced.
2. Anal pore below center near ventral margin of plaque.

Additional notes:

1. The anal plaque is superficially similar to that of Asvchis disparidentata. However, the anal pore is dorsal and both dorsal and ventral margins of the plaque are well developed in A. disparidentata.
