Aricidea (Allia) sp SF1 Barwick, 2008

- Modified neurosetal spines slightly falcate with terminal arista
- Median antenna clavate tapering to filiform tip
- Length of median antenna reaching to the middle of the first setiger
- About 18-20 pairs of branchiae each with a broad base tapering to fine filiform tip, last few pairs shorter and narrower
- Dorsal eyespots visible located on either side of the base of prostomium
- Pair of ventral cirri present on the pygidium
- Two additional incomplete specimens found at SWOO_56 (26 m, SEP 2007)
