

VOUCHER SHEET

IDENTIFIED AS: Halosydna latior Chamberlin, 1919.

SPECIMEN CODE: AHF 4

KEYS USED: Hartman, O. 1968 (Atlas)-p. 67  
Fauchald, K. 1977 - p. 59.

OTHER TEXTS CONSULTED: Chamberlin, R.V. 1919. - p. 1

IMPORTANT CHARACTERS: Elytra with heavy lateral fringe; simple neurosetae, body depressed; 18 pairs elytra.

RELATED SPECIES AND CHARACTER DIFFERENCES: Halosydna brevisetosa with vivid pigmentation on anterior segment; elytra with sparse marginal fringe; noticeable distal swelling on dorsal cirri; H. johnsoni has bifid neurosetae.

STATION DATA: AHF N3761

COMMENTS: There are problems with the definition of "heavy" or "slight" elytral fringe, in distinguishing a pale H. brevisetosa from a H. latior; and in the identification of juvenile Halosydna.
