

***Euchone* sp SD2** fide Rowe 2005

City of San Diego SedMapPLOO SM079 29July2004 195m.

Large specimen (entire in two pieces) in RCRpersColl - 1.5mm wide mid thoracic, 24 mm total length minus radioles, radioles ~10mm in length

1. 7 depression setigers
2. 28 total abdominal setigers
3. Collar with deep ventral notch, but no lateral notches (as in *E. velifera*).
4. Depression setigers curved around forming scoop with 2-3 setiger tubular enclosure containing anal opening.
5. Only lightly stained (additional staining will be done when imaged). Ventrums of thorax stain across and around lateral enclosing uncini. No stain from notosetal fascicle around through dorsum.

Remarks: Additional literature review remains, but preliminary review reveals no matching species from California.
