

Species: Leptostylis sp. A

Museum Number: _____

Describer: Undescribed Date: _____ Family: Diastylidae

Common Name: _____

Source: _____

Synonymy: _____ Location: _____

Distinguishing Characteristics:

Carapace and body smooth and shiny except for some small shallow pits on carapace.

Dorsal view of carapace shows hint of gently inflated posterior lobes.

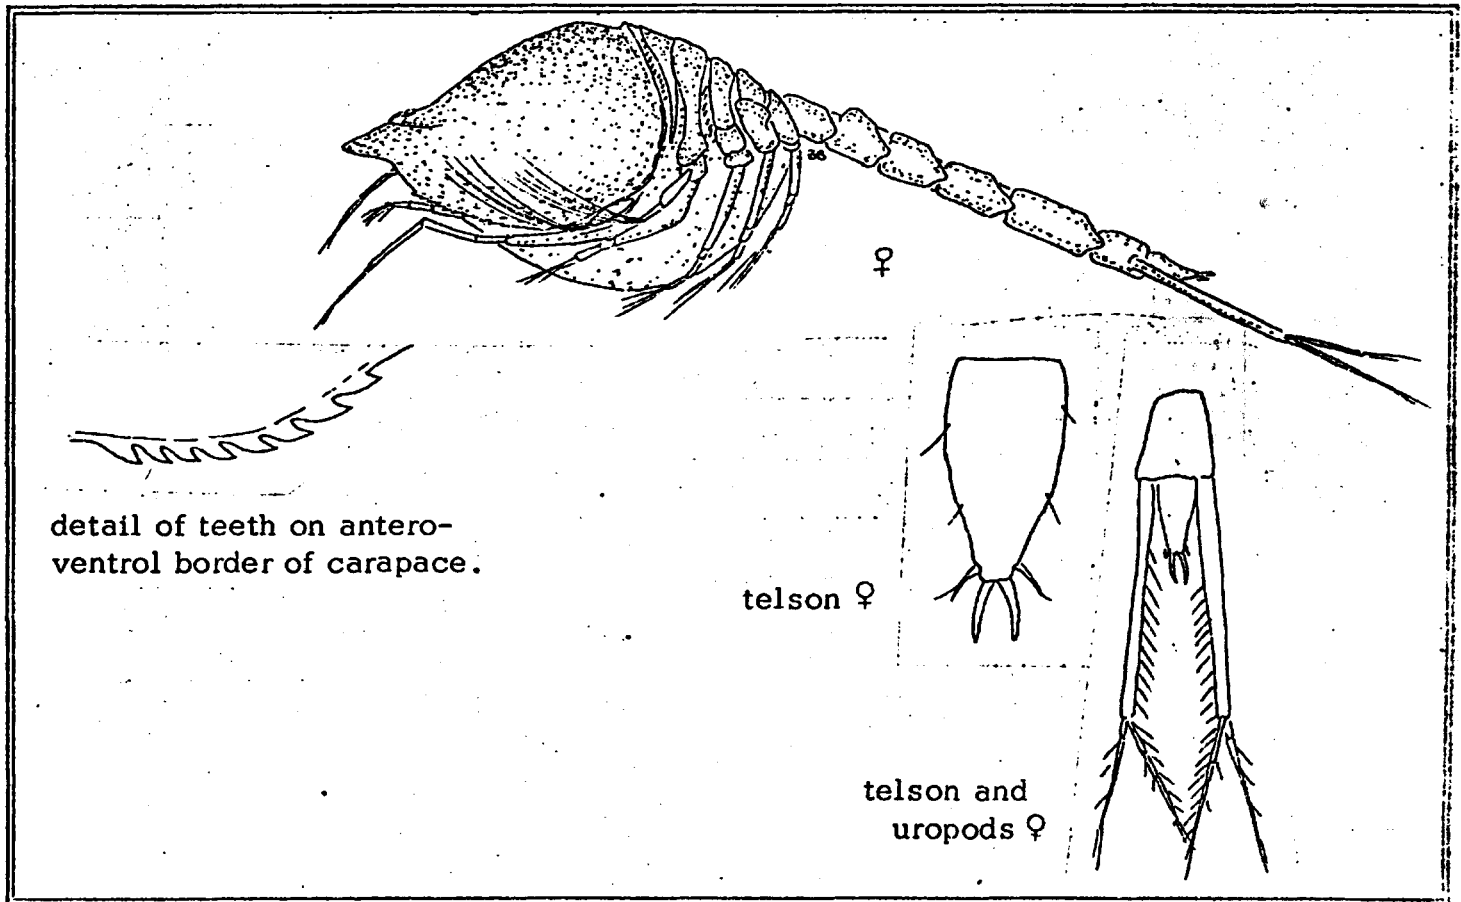

Telson with two terminal and two distal lateral spines (which are flagellate).

Telson approximately 4/10 length of peduncle of uropod.

Proximal 1/4 of peduncle bare, 11 spines on inner margin of rest of length.

Endopod with 8 spines on inner margin and 3 spines on outer margin.

Exopod with 3 spines on outer margin, none on inner margin.

Ovigerous: J F M A (M) J J A S O N D

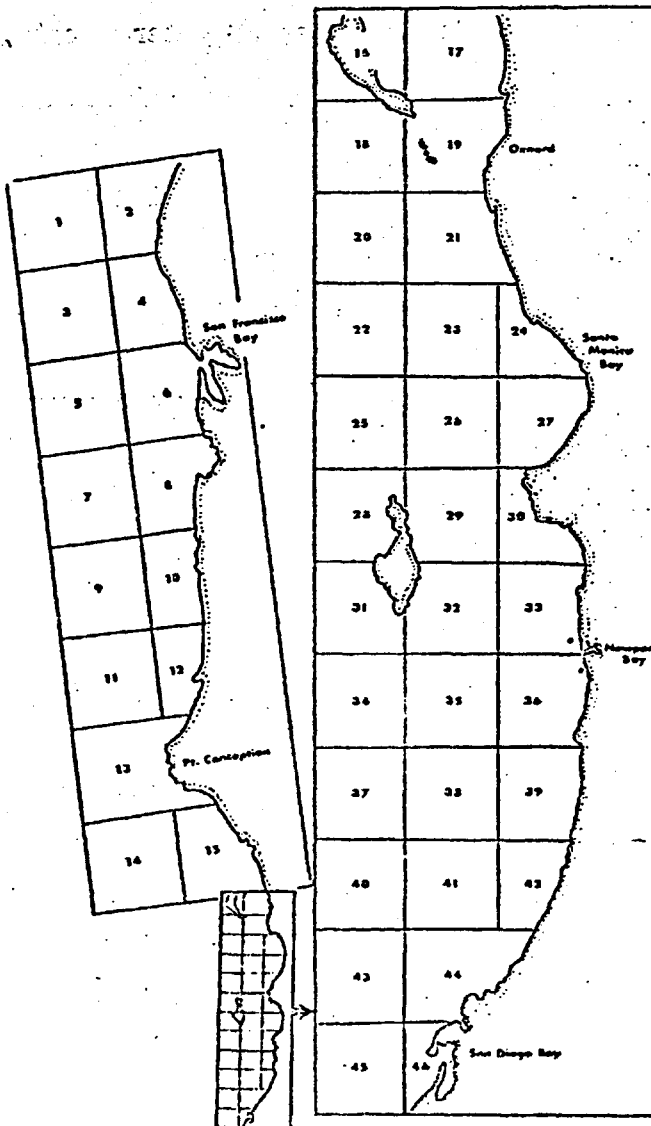

Juvenile: J F M A M J J A S O N D

Remarks:

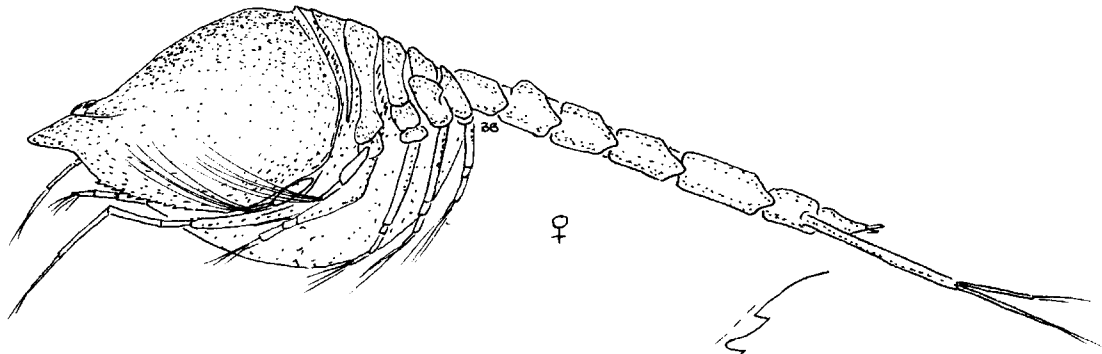

33 - 26 - 40 fm

Leptostylopsis sp. n.

detail of tooth on anterior dorsal border of telson

♀ telson & granules

telson ♂

Dorsum of pereopods
 - granules
 - shallow pits on carapace
 - telson with 2 long setae & dorsal lateral granules
 - peduncle base for about 1/4 its length
 - segments of equal length
 - granules on segments

Peduncle - 3 segments - 2nd & 3rd & 4th
 - granules on segments
 - granules on telson

- telson ~ 1/10 length of peduncle
 - Dorsum of pereopods
 - two long setae on telson
 - granules on telson
