

Phylum Arthropoda  
 Class Malacostraca  
 Superorder Eucarida  
 Order Decapoda  
 Suborder Reptantia  
 Infraorder Anomura  
 Family Paguridae

*Parapagurodes makarovi*

**Coloration:** Legs with longitudinal red strips on both carpus and propodus

**Defining Characteristics:**

- Shield length equal to width
- Rostrum elongate
- Ocular peduncles short
- Absence of strong spines on the dorsal surfaces of the palms of left and right chelipeds
- Dactyls of pereopods lacking a sulcus laterally
- Abdomen coiled
- Uropods asymmetrical

Illustration

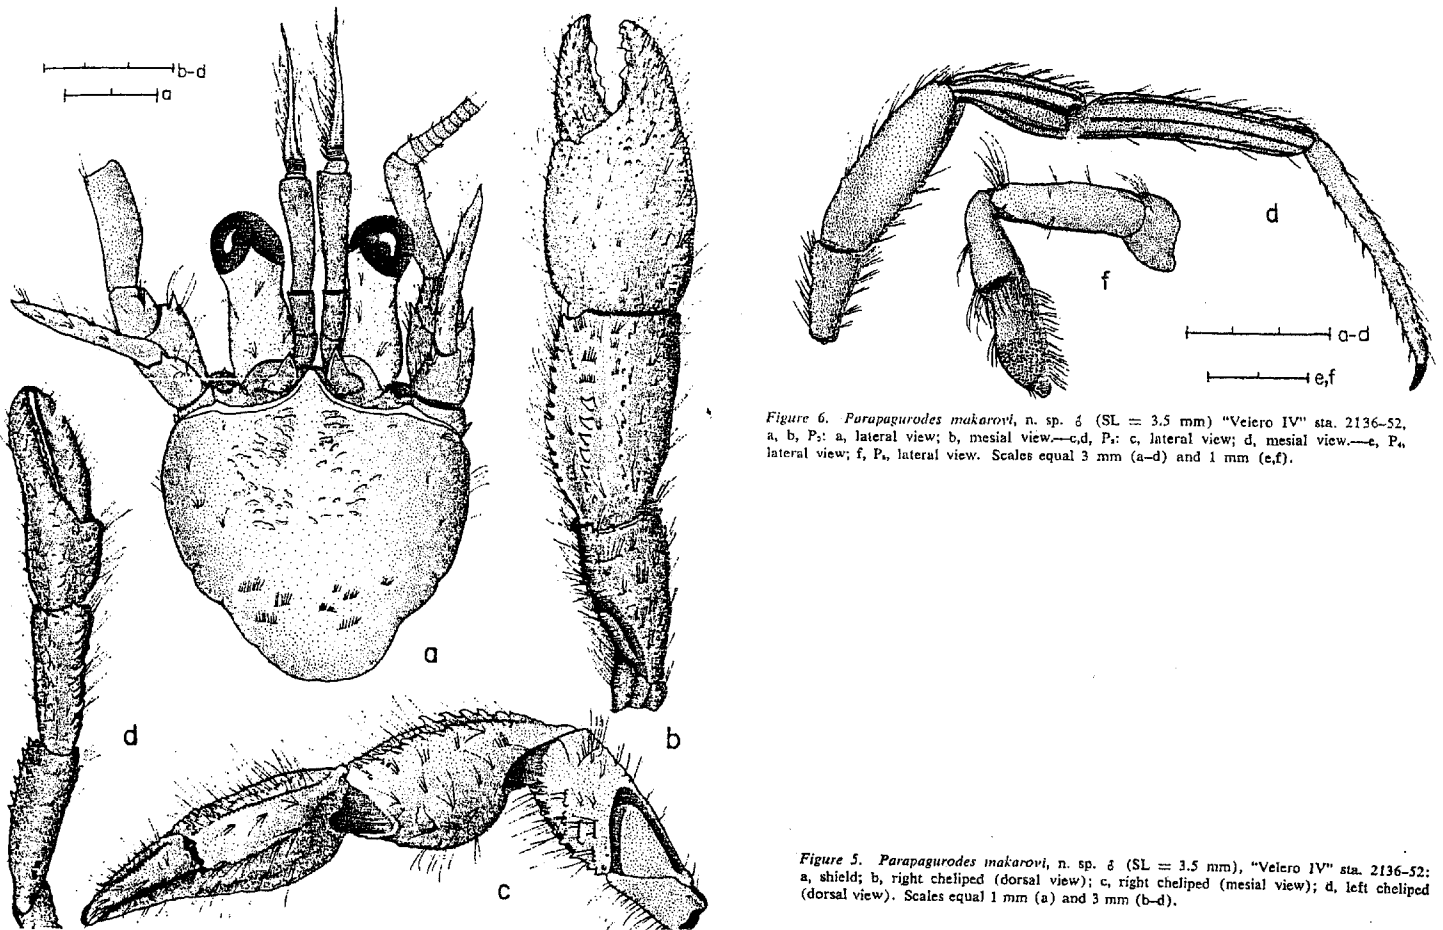

Figure 6. *Parapagurodes makarovi*, n. sp. ♂ (SL = 3.5 mm) "Veiero IV" sta. 2136-52, a, b, P<sub>2</sub>: a, lateral view; b, mesial view.—c, d, P<sub>2</sub>: c, lateral view; d, mesial view.—e, f, P<sub>4</sub>: e, lateral view; f, P<sub>4</sub>, lateral view. Scales equal 3 mm (a-d) and 1 mm (e,f).

Figure 5. *Parapagurodes makarovi*, n. sp. ♂ (SL = 3.5 mm), "Veiero IV" sta. 2136-52: a, shield; b, right cheliped (dorsal view); c, right cheliped (mesial view); d, left cheliped (dorsal view). Scales equal 1 mm (a) and 3 mm (b-d).
